Digital Monitors

Digital Information Resident Installations

PHOTO ADDENDUM

1. Webinars are produced by community leadership and streamed over the Teaching Network to keep our constituents informed and up to date with the latest developments in healthcare, education, criminal justice, technology and other areas of interest. The Internet Society NY Chapter has been instrumental in organizing several such events in our communities.

Community Emergency Operations Centers (EOC) are deployed by teams of trained public safety and emergency preparedness community leaders during emergencies and catastrophic events (e.g. gas explosion at apartment building, weather disruptions, etc.). In addition to ad hoc EOC deployment, emergency teams conduct weekly mobile radio situation reports in Manhattan, the Bronx and Brooklyn.

- 2-3. Teaching Network facilities include multiple, redundant wireless communications access and distribution technologies. Backup power sources included.
- 4-8. Streaming Webserver output for multiple, individual housing developments and communities. Streaming content is created and controlled by residents, and includes announcements, notifications and other info relevant to each development. Live shots of development common areas are also included. Additional streaming server output of news and information, including emergency notifications, from WEBT.
- 9-11. Resident-controlled Streaming service output, including lobby live streams, with local chat feature that enables resident leadership to make real-time announcements for the community at-large. Chat feature also enables individual residents/families to send messages to the community. Chat feature is moderated by resident leadership.
- 12-13. Streaming of development lobbies is feature of the *Virtual Tenant Patrol* service, created and managed by residents. The VTP service includes the posting of signage in building lobbies advising residents that they are being livestreamed.
14. Digital monitor bulletin boards mounted in development lobbies for real-time messaging, announcements, community information and emergency notifications to all residents. Digital content is created and posted by resident leadership at each development.
