Among the various programs being sponsored by DARPA/IPTO in the
area of computer communications, similar issues arise in the area
of network management. Work has progressed independently in the
various networks to this point to insure that a variety of
approaches would be explored, and in fact this has been the case.
However, at this point, we feel it would be valuable to have
joint discussion of these common network management issues.

To that end, we would like to extend an invitation to attend a
workshop on network management to be held at the USC Conference
Center on 11-13 January 1983. Jon Postel has kindly agreed to
act as conference coordinator and will be providing more
information about the location.

The intent of the workshop is to provide a forum for discussion
of the variety of network management issues. To that end, the
price of admission to the workshop is a brief position statement
reflecting your view of important issues, methods, and results.
Presentations will be made on the management techniques used for
each of the networks (Arpanet, SATNET, local nets, and internet)
to provide a basis for discussion, but the bulk of the time will
be devoted to open discussion. A preliminary agenda will be
provided shortly, and invitations extended for presentations.

Please notify us as soon as possible, and no later than 10
September 1982, as to your availability for the above dates. We
are looking forward to an interesting and productive set of
discussions.

Vint Cerf and Barry Leiner
